

- Provides managed connection into PanTerra Networks' datacenters
- Supports any MPLS network from any carrier
- Maximized customer flexibility and security
- Delivers guaranteed bandwidth and QOS from customer's site to PanTerra's services
- Cost effective disaster recovery re-route through standard Internet connection

PanTerra Networks' MPLSconnect is uniquely designed for businesses that have multiple locations and need the highest level of quality of service (QOS) for mission critical services such as voice and video applications. MPLSconnect is a solution that offers guaranteed QOS through a dedicated connection to PanTerra's services through a managed MPLS port which can be connected to any MPLS service provider at the customers' choice. MPLSconnect delivers the most cost effective and reliable solution in the industry. With MPLSconnect, PanTerra delivers a guaranteed level of bandwidth and QOS so that the customers' services are protected.

By supporting any MPLS carrier selected by the customer, PanTerra provides the most cost effective and reliable options. Other hosted providers may require the customer to purchase only their MPLS circuits. This has two significant disadvantages. First, customers cannot take advantage of free market dynamics to select the most cost effective solution. And second, there are limited disaster recovery options if the link goes down. Either a customer has to install two proprietary MPLS circuits which is prohibitively expensive or the customer lives with a limited recovery plan. With PanTerra's MPLSconnect, a customer can use a cost effective standard internet connection as a fall back disaster recovery option, which is a much more cost effective option.

### WHY MPLSCONNECT?

#### Superior Quality of Services

MPLSconnect enables customers to access a broader selection of MPLS networks for mission-critical services such as voice and video. MPLS networks offer better performance and guaranteed bandwidth using Class of Service (CoS) and priority queuing to identify which traffic is most important and ensures that it takes priority over other traffic.

#### Unique Approach for MPLS

PanTerra developed a unique approach to deliver superior benefits from the MPLS networks. By providing a unique MPLS port at PanTerra carrier-grade datacenters, customers are able

to select any MPLS carrier and purchase the MPLS circuit from the most cost effective provider. PanTerra datacenters interoperable with multiple major MPLS carriers ensuring its services are delivered to the customers with quality.

#### Maximum Flexibility, Reliability and Security

With PanTerra's unique MPLSconnect, customers have a broader options in their selection of an MPLS network. MPLS networks allow multi-location customers the option to deliver firewalled IP access from the network cloud to specified facilities.

#### Faster Disaster Recovery and Fail Over

MPLSconnect not only provides access to the MPLS network, it also allows customers the capability to leverage public internet connectivity as a fail over solution in case of an MPLS circuit failure. This enables better service availability to customers.

#### It's All About Applications

MPLSconnect delivers solutions today and a futureproof foundation for tomorrow. It guarantees service usage for PanTerra customers. With MPLS networks, customers are able to utilize and deploy more and more services and applications in a guaranteed quality manner.
